

Instacart Customer Retention & Order Cadence Analysis

Cohort analysis on a 25,000-user sample (Instacart Market Basket dataset)

5.5%

of customers reach order #50

~10 items

average basket size — stable across a customer's entire order history

54%

repeat rate (10+ orders) for produce/dairy-first customers vs. 44-48% for shelf-stable categories

19 vs 8 days

average days between orders: low-engagement vs. highly-retained customers

Sample: 25,000 users, ~410K orders. Dataset pre-filtered by Instacart/Kaggle to include only customers with 4-100 historical orders — see pages 2-5 for full detail on each metric.
